

NAME

rgbasm — Game Boy assembler

SYNOPSIS

```
rgbasm [-EhLVvw] [-b chars] [-D name[=value]] [-g chars] [-i path]
        [-M dependfile] [-o outfile] [-p pad_value] [-r recursion_depth] file
```

DESCRIPTION

The **rgbasm** program creates an object file from an assembly source file. The input *file* can be a file path, or `-` denoting `stdin`. Its arguments are as follows:

- `-b chars`
Change the two characters used for binary constants. The defaults are 01.
- `-D name[=value]`
Add string symbol to the compiled source code. This is equivalent to `name EQU "value"` in code. If a value is not specified, a value of 1 is given.
- `-E`
Export all labels, including unreferenced and local labels.
- `-g chars`
Change the four characters used for binary constants. The defaults are 0123.
- `-h`
By default, **rgbasm** inserts a ‘nop’ instruction immediately after any ‘halt’ instruction. The `-h` option disables this behavior.
- `-i path`
Add an include path.
- `-L`
Disable the optimization that turns loads of the form **LD [\$FF00+n8],A** into the opcode **LDH [\$FF00+n8],A** in order to have full control of the result in the final ROM.
- `-M dependfile`
Print `make(1)` dependencies to *dependfile*.
- `-o outfile`
Write an object file to the given filename.
- `-p pad_value`
When padding an image, pad with this value. The default is 0x00.
- `-r recursion_depth`
Specifies the recursion depth at which RGBASM will assume being in an infinite loop.
- `-V`
Print the version of the program and exit.
- `-v`
Be verbose.
- `-w`
Disable warning output.

EXAMPLES

You can assemble a source file in two ways. Straight forward way:

```
$ rgbasm -o bar.o foo.asm
```

Pipes way:

```
$ cat foo.asm | rgbasm -o bar.o -
$ rgbasm -o bar.o - < foo.asm
```

The resulting object file is not yet a usable ROM image — it must first be run through *rgblink(1)* and *rgbfix(1)*.

HISTORY

rgbasm was originally written by Carsten Sørensen as part of the ASMotor package, and was later packaged in RGBDS by Justin Lloyd. It is now maintained by a number of contributors at <https://github.com/rednex/rgbds>.
